**News Release**

February 24, 2016

## **Wellnex collagen peptides show positive outcomes for skin health in RCT and the paper has published on an international journal (Journal of the Science of Food and Agriculture)**

Nitta Gelatin conducted a randomized double-blind placebo controlled clinical trial to investigate the effect of collagen hydrolysates which contain bioactive dipeptides (Pro-Hyp and Hyp-Gly) on improvement in skin condition.

According to the results, the collagen hydrolysate with higher content of bioactive dipeptides showed better results on improving skin condition, hydration, elasticity, wrinkle and roughness.
